

Introduction to GitHub

What is GitHub?

GitHub is a website used to store coding projects online. It helps students save their work safely and access it anytime from different computers.

Many programmers and students use GitHub to:

- Save coding files online
- Share projects with friends or teammates
- Work on projects from school or home
- Keep track of changes made in a project

You can think of GitHub as an online storage space specially made for coding projects.

GitHub Website: <https://github.com>

1. Creating a GitHub Account

Before using GitHub, You will need your personal mail Id.

Follow the steps below carefully.

Step 1: Open the GitHub Website

1. Open any web browser such as Chrome,Safari or Edge.
2. Click on the given link: <https://github.com>
3. When the GitHub homepage opens, click on the **Sign up** button.

Step 2: Sign Up Using a Google Account

GitHub allows users to create an account using their Google account.

1. Click on **Continue with Google**.
2. This method is easier if your email is connected automatically else sign in using your gmail.

Step 3: Choose Your Google Account

After clicking the Google sign-up option, a new window will appear.

1. Select the Google account you want to use for GitHub.
2. If needed, enter your Google password.

Human Verification

- GitHub checks whether the user is a real person and not a robot. This process is called **Human Verification**.
- Each time you may see different puzzles during this step.

Step 4: Start the Verification

1. A verification page will appear on the screen.
2. Click on the **Visual puzzle** button to begin.
3. In the visual puzzle, a person will appear standing on the right side of the screen and two icons will appear on the left side.
4. Carefully check whether the icon under the person's feet matches the icon shown on the left side.
5. If both icons are the same, select the correct option as instructed on the screen.
6. Complete all 8 verification puzzles correctly without making mistakes to finish the verification process.

Step 5: Wait for Browser Check

GitHub may first check your browser before showing the puzzle.

1. Wait a few seconds until the checking process is complete.

Step 6: Complete the Puzzle

1. Carefully read the instructions shown on the screen.
2. Solve the puzzle correctly.
3. After completing the puzzle, click the **Submit** button.

Step 7: GitHub Account Successfully Created

After completing the verification, your GitHub account will be created successfully.

You can now:

- Create coding projects
- Save files online
- Explore GitHub features

2. Uploading Files to GitHub

Introduction

GitHub allows users to upload project files directly from the website without using VS Code.

This method is simple and useful for beginners who want to quickly upload files using their web browser.

In this tutorial, you will learn how to:

- Create a repository on GitHub
- Choose Public or Private visibility
- Upload files directly from your computer
- Save files using Commit Changes

2.1 Creating a Repository on GitHub

A repository (repo) is a folder where GitHub stores project files online.

Repositories can contain:

- Coding files
- Images
- Documents
- Project folders

Step 1: Open GitHub and Sign In with Google

1. Open your web browser.
2. Visit the GitHub website:

<https://github.com>

3. Click on the **Sign in** button.
4. Choose the **Continue with Google** option.
5. Select your Google account and complete the sign-in process.

Step 2: Open Your Profile Menu

After signing in successfully:

1. Click on your **profile picture icon** at the top-right corner of GitHub.
2. A menu will appear on the screen.

Step 3: Open the Repositories Section

1. From the profile menu, click on **Your repositories**.

2. The repositories page will now open..

Step 4: Create a New Repository

1. Click on the **New** button or the **+** icon.

Step 5: Enter Repository Name

A new page will open asking for repository details.

1. Type a repository name.

Example:

- MyProject
- PythonGame
- SchoolProject

2. You can also add a short project description if needed.

The screenshot shows the GitHub 'Create a new repository' interface. At the top, there's a search bar and navigation icons. The main heading is 'Create a new repository'. Below it, there's a note: 'Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#). Required fields are marked with an asterisk (*)'. The form is divided into two sections: '1 General' and '2 Configuration'. In the 'General' section, the 'Owner' is 'Abhishek-Khan-2241' and the 'Repository name' is 'MyPythonGame', with a green checkmark indicating it's available. The 'Description' is 'My Python Game Description' (28 / 250 characters). In the 'Configuration' section, 'Choose visibility' is set to 'Public'. There are options to 'Add README' (currently 'Off'), 'Add .gitignore' (set to 'No .gitignore'), and 'Add license' (set to 'No license'). A green 'Create repository' button is at the bottom right.

Step 6: Choose Public or Private Repository

GitHub provides two visibility options.

- **Public Repository**
 - Anyone can view the repository
 - Useful for sharing projects publicly
- **Private Repository**
 - Only you and selected people can access the repository
 - Useful for personal or school projects

1. Select either **Public** or **Private**.

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).
Required fields are marked with an asterisk (*).

1 General

Owner * Abhesham-Khan-2241 / Repository name *
MyPythonGame is available.

Great repository names are short and memorable. How about [super-duper-winner?](#)

Description

28 / 350 characters

2 Configuration

Choose visibility *
Choose who can see and commit to this repository. Public

Add README
READMEs can be used as longer descriptions. [About READMEs](#) Off

Add .gitignore
.gitignore tells git which files not to track. [About .gitignore files](#) No .gitignore

Add license
Licenses explain how others can use your code. [About licenses](#) No license

[Create repository](#)

Step 7: Create the Repository

1. Click on the **Create repository** button.

GitHub will now create the repository.

Create a new repository

Repositories contain a project's files and version history. Have a project elsewhere? [Import a repository](#).
Required fields are marked with an asterisk (*).

1 General

Owner * Abhesham-Khan-2241 / Repository name *
MyPythonGame is available.

Great repository names are short and memorable. How about [super-duper-winner?](#)

Description

28 / 350 characters

2 Configuration

Choose visibility *
Choose who can see and commit to this repository. Public

Add README
READMEs can be used as longer descriptions. [About READMEs](#) Off

Add .gitignore
.gitignore tells git which files not to track. [About .gitignore files](#) No .gitignore

Add license
Licenses explain how others can use your code. [About licenses](#) No license

[Create repository](#)

3. Uploading Files to the Repository

After creating the repository, files can be uploaded directly from the computer.

Step 1: Open the Upload Files Page

1. Inside the repository, click on the **uploading an existing file** button.
2. Select **Upload files**.

Step 2: Drag and Drop Files

GitHub allows users to upload files using drag and drop.

1. Open the folder containing your project files.
2. Drag the files into the upload area on GitHub.

You can also click on **choose your files** to manually select files from your computer.

Step 3: Wait for Files to Upload

1. GitHub will begin uploading the selected files.
2. Wait until all files finish uploading.

Committing Uploaded Files

Before saving the uploaded files permanently, GitHub asks for a commit message.

A commit message explains what files or changes were added.

Step 4: Write a Commit Message

1. Scroll down to the **Commit changes** section.
2. Type a short message.

Example messages:

- Uploaded project files
- Added Python game
- Added school project

Step 5: Save the Uploaded Files

1. Click on the **Commit changes** button.

GitHub will now save the uploaded files inside the repository.

Repository Successfully Uploaded

The project files are now stored safely on GitHub.

Students can now:

- Open files online
- Share repository links
- Edit files later
- Upload more files anytime

Conclusion

- GitHub allows users to upload project files directly from the website without using any coding commands.
- This method is simple and beginner-friendly for students learning GitHub for the first time.

4. Installing Visual Studio Code

Visual Studio Code (VS Code) is a coding editor used to write and manage programs.

Step 1: Download VS Code

1. Open the VS Code website:

<https://code.visualstudio.com>

2. Click on the **Download for Windows** button.

Step 2: Install VS Code

1. Open the downloaded VS Code setup file.
2. Follow the installation steps.
3. Click **Finish** after installation is complete.
